**DETAILED ACTION**

***Response to Amendment***

The following is in response to the amendment of June 7, 2010.

***Allowable Subject Matter***

Claims 2-17 and 19-25 are allowed.

The following is a statement of reasons for allowance:

Claims 4 (independent), 2, 3, 5-17, and 20-25 are allowed, because in a paper machine translation device comprising a first arm attached to an attachment device, turnable around a first axis of rotation, and rotated by a motor, also comprising a second arm, turnable around a second axis of rotation at a distance from the first axis of rotation, mechanically coupled to the first arm, and turned by the turning of the first arm in relation to the attachment device, and further comprising a holder arranged on the second arm, turnable around a third axis of rotation at a distance from the second axis of rotation, and mechanically coupled to be turned by the rotation of the second arm in relation to the first arm, wherein the mechanical couplings and the distances between the axes of rotation are arranged such that the rotation of the first arm by the motor results in a translation of the holder in relation to the attachment device, the prior art does not disclose or suggest further providing the translation device with a first wheel with a central axis arranged fixed on the attachment device so that the central axis of the first wheel corresponds to the first axis of rotation, a second wheel with a central axis turnably arranged on the first arm and arranged fixed with the second arm so that the rotational axis and central axis of the second wheel correspond to the second axis of rotation, and a first transfer means arranged between the

Art Unit: 1791

first wheel and the second wheel, therein providing mechanical coupling between the movement of the second arm and the movement of the first arm.

Claim 19 is allowed, because in a paper machine translation device comprising a first arm attached to an attachment device, turnable around a first axis of rotation, and rotated by a motor, also comprising a second arm, turnable around a second axis of rotation at a distance from the first axis of rotation, mechanically coupled to the first arm, and turned by the turning of the first arm in relation to the attachment device, and further comprising a holder arranged on the second arm, turnable around a third axis of rotation at a distance from the second axis of rotation, and mechanically coupled to be turned by the rotation of the second arm in relation to the first arm, wherein the mechanical couplings and the distances between the axes of rotation are arranged such that the rotation of the first arm by the motor results in a translation of the holder in relation to the attachment device, the prior art does not disclose or suggest further providing the mechanical coupling by means of link arms, wherein at least a first link arm is arranged between the attachment device and the second arm to provide a mechanical coupling to the second arm.

### ***Response to Arguments***

In view of Applicant's remarks and the amendment to the claims, the following objections/rejections set forth previously have been overcome and are therefore withdrawn.

Claim 26 under 35 U.S.C. 112, second paragraph, and under 35 U.S.C. 101;

Claims 1, 2, 18, 20-22, and 26 under 35 U.S.C. 102(b) over Hooper (GB 2234569);

Claim 3 under 35 U.S.C. 103(a) over Hooper in view of Wilder (US 5,967,452); and

Claims 23-25 under 35 U.S.C. 103(a) over Hooper in view of Applicant's admission of prior art.
